Reviewer's report

Title: Assessment of esophageal involvement in systemic sclerosis and morphea (localized scleroderma) by clinical, endoscopic, manometric and pH metric features: A prospective comparative hospital based study

Version: 5 Date: 9 September 2014

Reviewer: Manuele Furnari

Reviewer's report:

Although the work by Tarif and colleague is based on some bias that cannot be modified (i.e. lack of impedance, lack of swallow with viscous bolus, etc) the authors managed properly all the concerns.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
