Reviewer's report

Title: The Prevalence of Gastro-Esophageal Reflux Disease and Esophageal Dysmotility in Chinese Patients with Idiopathic Pulmonary Fibrosis

Version: 3 Date: 21 November 2014

Reviewer: fernando Herbella

Reviewer's report:

The authors did not acknowledged the possibility of gerd due to an increased transdiaphragmatic pressure gradient. They assume gerd occurs only due to a defective barrier. This may not be true in patients with pulmonary diseases as shown by the own results of the manuscript.

The manuscript, after revision, became too long, confusing, discuss unrelated topics and language is really poor.

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
