Reviewer’s report

Title: Laparoscopic colonic resection for splenic flexure cancer: our experience.

Version: 3
Date: 31 January 2014

Reviewer: Jose Fernandez-Cebrian

Reviewer’s report:

The authors show a cohort of patients over 6 years, where they collect their clinical experience and results obtained oncologicos.

I would ask some questions:

. 1 - Is there a selection criteria based on: BMI, surgeon experience ... or all patients undergo laparoscopic surgery?
. 2 - In the section on materials and methods discussed 20 operated patients, but in Table 1 results include only 18. This could alter the results.
3.-It would be desirable to complete the paper with clinical and oncological data from the open surgery for splenic flexure colon cancer (even if they were historical data) to reliably evaluate the goodness or otherwise of laparoscopic surgery.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
