Reviewer's report

Title: Cost-Effectiveness of Sofosbuvir-Based Treatments for Chronic Hepatitis C in the US

Version: 3 Date: 24 March 2015

Reviewer: Sergio Iannazzo

Reviewer's report:

The authors improved significantly the manuscript and touched all points raised in the previous round of revision. Overall I believe that the manuscript is now acceptable. A few residual concerns remain around the following (minor) points:

1. the abstract is still not entirely clear, especially for what concerns the description of the comparators tested. I suggest to summarize the information currently well presented in page 4 rows 159-163 and page 5 rows 164-170

2. in tables 7.1 and 7.2 I suggest to use the more standard terms "dominant" and "dominated" rather than "efficient" and "inefficient"

3. in Figures 1-9 I suggest to avoid representing negative thresholds of $/QALY, since the interpretation of these can be confusing. Moreover I suggest to present all charts with the same horizontal scale to improve the comparability and to avoid to report numbers in the scientific notation, which may be non familiar to all readers (use instead $ x 1,000 or $ million)

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
