Title: Multiparametric functional magnetic resonance imaging for evaluation of hepatic warm ischemia-reperfusion injury in a rabbit model

Version: 0 Date: 11 Aug 2017

Reviewer: Etem Alhan

Reviewer's report:

Please include all comments for the authors in this box rather than uploading your report as an attachment. Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included in a text format.

Please overwrite this text when adding your comments to the authors.

The study has a original think. It investigates the relationship between MR investigation and warm ischemia-reperfusion injury.

The study is a preliminary study and the numbers of the animals are few. On the other way Ischemia-reperfusion injury is a dynamic process but the measurement of MR is nondynamic. The study must be supported further with many new studies. As a new study, it can be accepted for this journal

Sincerely

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review

Quality of written English
Please indicate the quality of language in the manuscript:
