Title: Hepatitis B Reactivation among 1962 Patients with Hematological Malignancy in Taiwan

Version: 0 Date: 24 Oct 2016

Reviewer: Alisan Kahraman

Reviewer's report:

The authors should and can address the following questions:

1. Did the investigated patients with HBV reactivation demonstrated a different course in relation to different antiviral regimes, e.g. was outcome better in patients treated with entecavir?

2. Did the authors check HBe and anti-HBe status? Was co-infection with hepatitis D excluded?

3. The authors state that presence of diabetes was a risk factor for HBV reactivation. An increased BMI (body mass index) may also go along with acute liver failure. Was increased BMI a risk factor for liver failure in the cohort?

Are the methods appropriate and well described?
