Reviewer’s report

Title: Treatment of long-segment Barrett's adenocarcinoma by complete circular endoscopic submucosal dissection: a case report

Version: 0 Date: 29 Jun 2017

Reviewer: Diana Sacchi

Reviewer's report:

This case report is well-written in an engaging and lively style and deals with an interesting endoscopic topic which is the application of ESD as a conservative therapeutic option in case of LSBA. However, I would seize the chance to express two minor concerns:

1- I strongly suggest you check the figure 3-d: it may be better a higher magnification to show the minimal tumor extension under the adjacent squamous epithelium;

2- I would appreciate if you could be more precise about the use of ESD as a therapeutic option for early esophageal adenocarcinoma. Actually, early adenocarcinoma (T1) is subdivided into intramucosal (T1a) and submucosal (T1b) lesions. Therefore, in your case report, ESD is suggested as a therapeutic option for just T1a early adenocarcinoma, isn't it?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Unable to assess

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
