Reviewer’s report

Title: Circular stripes were more common in Barrett's esophagus after acetic acid staining

Version: 0  Date: 07 Dec 2017

Reviewer: Stefano Brignola

Reviewer's report:

The article is of interest and well written and organised but i have some minor concern:

- at line 96 there is a repetition of the AA’s preparation which has already been illustrated at line 90;

- in the discussion section is reported data about correlation between grastroesophageal reflux and symptoms, but these data are not present in the results or methods sections; I suggest to include these data in table 1.

Thanks for your submission.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
