Reviewer’s report

Title: Is perceived intolerance to milk and wheat associated with the corresponding IgG and IgA food antibodies? A cross sectional study in subjects with morbid obesity and gastrointestinal symptoms

Version: 0 Date: 26 Nov 2017

Reviewer: Ahmet Basturk

Reviewer's report:

Dear Editor;

The study is generally well designed but there will be a few suggestions

1. The introduction is very long and needs to be shortened.

2. Why did not authors use the rome 4 criteria for IBS recognition.

3. Do they specify the content of "Gastrointestinal Symptom Rating Scale"

4. If the algorithm involved in the study is done, it will be more descriptive.

5. The results are only specified with tables, but I think if the figure is more descriptive.

6. The discussion part is more like a review, it is more appropriate to compare the results of the authors' work with previous works

7. Do the authors think to do similar work with gluten as well as wheat.

Best regards,

Ahmet Basturk, MD

Pediatric Gastroenterologist
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
