Reviewer’s report

Title: Superior Mesenteric Artery Syndrome coexists with Nutcracker Syndrome in a female: a case report

Version: 1 Date: 28 Sep 2018

Reviewer: Weiwei Ding

Reviewer's report:

This case reports a female patient with SMA syndrome with Nutcracker phenomenon. The authors highlight the importance of the combination therapy of long-term nutritional supporting and promotility agents.

I have several concerns:

1. As a national GI referral center, SMA syndrome with Nutcracker phenomenon is not a rare case in my department. Even in the literatures, there has been lots of reports about the treatments and diagnosis of SMA syndrome with Nutcracker phenomenon.

2. The treatment in this case added nothing new to our knowledge about this disease.

3. As a CASE REPORT, this manuscript lacks the results of a long-term follow up. How about the updated status after six-month of home nutritional treatment?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
