The manuscript improved a lot after revision. There is one thing for the authors to clarify:

In the logistic regression, what does it mean by the OR? Were the outcome variables binary? How did the authors cut the continuous variables like physical functioning, etc.? (Tables 5 and 6). We also need the authors' interpretation of the ORs obtained in the two Tables. This part is new in the revision. We may need a statistician's comments.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
