Reviewer’s report

Title: A novel technique for repositioning a nasobiliary catheter from the mouth to nostril in Endoscopic Retrograde Cholangiopancreatography

Version: 1  Date: 15 Oct 2019

Reviewer: Hirofumi Kogure

Reviewer’s report:

The authors evaluated the usefulness of the new loop-device for facilitating the repositioning of an ENBD catheter from the mouth to nostril. However, this paper has little clinical significance. I think that the wire loop technique reported by Hamano et al. is enough for the repositioning of an ENBD catheter. In addition, the wire loop technique has the advantage of not incurring extra costs. The authors have to clarify whether this new device is reusable and how to sterilize.

Are the methods appropriate and well described?  
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?  
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?  
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review? 
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
