Reviewer’s report

Title: Gastric schwannoma with giant ulcer and lymphadenopathy mimicking gastric cancer: a case report

Version: 0 Date: 04 Nov 2019

Reviewer: Makoto Arai

Reviewer's report:

The author reported a case with gastric schwannoma and the findings of PET-CT.

In upper-endoscopy, there was no pathological evaluation before surgery. It is possible to diagnose gastric schwannoma by endoscopy and pathological examination.

It is difficult to evaluate the meaning of the finding of PET-CT in LN.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Unable to assess

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
