This is a well constructed endeavor. Your methods section was very clear.

I would recommend that you tighten up your discussion. Your data suggests a correlation between this particular SNP and gastric cancer risk by the genotype and recessive models in men in your cohort. you don't address this specifically. I anticipate that is because there is no corroborating data available by your group or others but I think you should address this.

You also make the assertion that genetic variation in MIR155HG influences the transcriptional product. What is this based on?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
