Reviewer's report

Title: Pain in Dementia: prevalence and associated factors. Protocol of a multidisciplinary study.

Version: 2 Date: 21 February 2015

Reviewer: Sophie Pautex

Reviewer's report:

The study is very interesting and very complete. The main challenge will probably be to complete all these exams in this population and to have results for all the secondary objectives

1. Will the study design adequately test the hypothesis: yes

2. Are sufficient details provided to allow replication of the work or comparison with related analyses: if not, what is missing? The study is very well described

3. Does the manuscript adhere to the relevant standards for reporting and data deposition: if not, in what ways? yes

4. Do the figures appear to be genuine, i.e. without evidence of manipulation? there are no figures

5. Is the writing acceptable? yes

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
