Reviewer's report

Title: The impact of music therapy on managing neuropsychiatric symptoms for people with dementia and their carers: a randomised controlled feasibility study

Version: 3 Date: 28 February 2015

Reviewer: Kee-Lee Chou

Reviewer's report:

Minor essential revisions:
1. The contribution of the paper must be clearly stated. As the authors mention that many similar studies have been conducted previously, how the current study is different from the earlier ones and fill the gaps.

2. Attrition analysis must be performed.

3. The paper could be shortened substantially to be a brief paper.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:

I declare that I have no competing interests.
