Reviewer’s report

**Title:** Relationship between the Montreal Cognitive Assessment and Mini-Mental State Examination for Assessment of Mild Cognitive Impairment in Older Adults

**Version:** 3  
**Date:** 17 March 2015

**Reviewer:** Isabel Santana

**Reviewer’s report:**

“Relationship between the Montreal Cognitive Assessment and Mini-Mental State Examination for Assessment of Mild Cognitive Impairment in Older Adults” is a clinical useful investigation considering the huge numbers of people with mild forms of cognitive impairment. Besides the analysis is based on data from ADNI, which is a strong and well-investigated cohort of US subjects. In my opinion, the manuscript does have scientific merit. However, I have several major and minor concerns which deserve a major revision of the paper before acceptance (that I will identify when revising the topic parts of the manuscript (uploaded attachment).

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** Yes, and I have assessed the statistics in my report.
