Reviewer’s report

Title: Dementia Knowledge Assessment Scale (DKAS): Confirmatory factor analysis and comparative subscale scores among an international cohort.

Version: 1 Date: 04 May 2017

Reviewer: Steven Muncer

Reviewer's report:

Please include all comments for the authors in this box rather than uploading your report as an attachment. Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included in a text format.

Please overwrite this text when adding your comments to the authors.

Overall I think the authors have done a good job of trying to deal with the comments made in my review. I don't agree with some of the logic of some of their replies to me, which for many things seems to be lots of people have done it or said it so it must be true. For example, the use of PCA (which is more to do with the vagaries of spss as it is the default option, than anything else) and strange belief that anyone (who knew anything about statistics) said that Cronbach's alpha has to be above 0.7. Alpha should be the least preferred of the many measures of reliability partly because of the effect of item number. However, as it appears the end result of using both meets other criterion it seems appropriate that it is published. I appreciate that the authors tried the bifactor approach, however, and otherwise as I said previously the authors have done a good job.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
