Title: Medical and moral considerations regarding complex medical decisions in older patients with multimorbidity: a compact deliberation framework

Version: 3 Date: 05 Nov 2017

Reviewer: Hung-Bin Tsai

Reviewer’s report:

1. Please refine your decision framework and add more details about each category (or step) you propose. For example, how should the caring physician derive their impression, and how did they distinguish between different types of multimorbidity? Other categories should follow this example so that the authors can enrich their claim. Otherwise the questions they put forth would appear less attractive, compared to other more axis- or disease-specific decision aid in the literature.

2. Please compare your decision framework to existing ones (ex. 4-box model), in the form of a table, listing the major similarities and differences at the same time.

Are the methods appropriate and well described?
