Reviewer’s report

Title: Effect of an Interactive E-learning Tool for Delirium on Patient and Nursing Outcomes in a Geriatric Hospital Setting: Findings of a Before-After study

Version: 1 Date: 03 Nov 2017

Reviewer: Fabio Guerini

Reviewer's report:

As stated in the first review of the work, the subject of this study is of interest to readers of BMC Geriatrics: educational strategies to increase delirium knowledge among nurses are desirable.

The authors aimed some requests specifying some limits of the study.

Although some methodological features remain debatable concerning the study design and its conclusions, the attempt to develop new tools to increase the sensitivity of clinicians to delirium deserves interest and attention.

Further studies are needed to clarify the role of the previous staff training on the effectiveness of the delirium tool.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
