Reviewer’s report

Title: IN-HOME PHYSICAL FRAILTY MONITORING: RELEVANCE WITH RESPECT TO CLINICAL TESTS

Version: 1 Date: 10 Aug 2018

Reviewer: Qian Li Xue

Reviewer's report:

The authors need to include other demographic and health characteristics in Table 1, for example, ADL dependency, walking difficulty, balance disorders, nutritional status, comorbidity, HRQOL, risk of depression.

It appears that, of the 194 subjects included in the study, there were only 6 people classified as frail by the Fried's phenotype and 7 by ARPEGE, and of the 8 classified as frail by either method, only 5 (63%) were in agreement. This is a significant limitation that needs to be mentioned in the discussion.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
