Title: Virtual Reality among the Elderly: a Usefulness and Acceptance Study from Taiwan

Version: 1 Date: 08 May 2019

Reviewer: Mario Ulises Pérez-Zepeda

Reviewer's report:

The manuscript improved. The authors included my suggestions. I still have some minor concerns.

- English is much better, however there are still some minor issues with the manuscript that a final revision could arrange.

- Please check the use of abbreviations and the time they are defined for the first time (or not defined, as PI). Even that a list of abbreviations is now included, the text needs to have them defined whenever they appear for the first time.

- Figure 1 needs a more informative caption.

- Please do not interpret in the results section (things like 'a good cronbachs alpha...'), leave interpretations for the discussion section.

- Discussion is still outreaching. For example: how can these results show the need to alert family, caregivers etc? This is clearly out of the scope of the manuscript.
