Reviewer's report

Title: Severe congenital neutropenia caused by the ELANE gene mutation in a Vietnamese boy with misdiagnosis of tuberculosis and autoimmune neutropenia: a case report

Version: 3 Date: 26 August 2014

Reviewer: Chen Liu

Reviewer's report:

major compulsory revision:
1. It is unclear to me that how authors excluded AIN and suspected SCN. It is important to state the detailed process because it will be a very helpful guide for the future.
2. I expect a more detailed explanation of the ELANE gene mutation analysis. Is it applicable for diagnosis of SCN in hospitals in Vietnam? Such as, the cost of the analysis, the availability of instruments.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
