Reviewer’s report

Title: Prophylaxis in older Canadian adults with hemophilia A: Lessons and more questions

Version: 3  Date: 2 December 2014

Reviewer: Angel Gabriel G Vargas Ruiz

Reviewer’s report:

Major Compulsory Revisions:
- No

Minor Essential Revisions:
- In table 1, the percentage of the patients >40 años is 101 % in baseline FVIII:C (77 + 17 + 7).
- In Factor utilization, line 201 refers to the table 4. No table 4. Should be table 3.

Discretionary Revisions:
- In Patients and Methods section, the definition of severe hemophilia is FVIII:C less than or equal to 2 %. This really is including patients with severe (FVIII:C < 1 %) and moderate hemophilia (FVIII:C 1-5 %). I suggest clarification.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
