Reviewer's report

Title: Antibiotic susceptibility of Clostridium difficile is unchanged despite widespread use of broad spectrum antibiotics

Version: 1 Date: 16 June 2014

Reviewer: Dongsheng Zhou

Reviewer's report:

This is a totally descriptive study. The strain collection is limited since they came from a single location and from an old time range. The data presented are not sufficient to make the conclusions which the authors advance. There are numerous sentences in the text that the authors need to clarify and/or rephrase.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
