Reviewer’s report

Title: Low prevalence of methicillin resistant Staphylococcus aureus as determined by an automated identification system in two private hospitals in Nairobi, Kenya: A cross sectional study

Version: 3 Date: 22 May 2014

Reviewer: Wilhelm Oosthuysen

Reviewer’s report:

Although Omuse et al. conducted a study using a new technology in their environment which significantly reduced the prevalence of methicillin-resistance in S. aureus, I still feel (as per my initial assessment), the study conducted does not contain enough data to be published as a full length article. I would recommend that the authors submit their work as a research note or short communication to another journal, or as a Technical Advance to BMC Infectious Diseases.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
