Reviewer's report

Title: Determinants of antiretroviral adherence among HIV positive children and teenagers in rural Tanzania: A mixed methods study

Version: 2 Date: 7 December 2014

Reviewer: Werner Schimana

Reviewer's report:

The authors have addressed the previous comments very well and the manuscript appears to have clearly improve.

There one Minor Essential Revisions remaining:

1. Background section: Itb states that in 2011 160,000 children were living with HIV in TZ of which only 5% had access to ART. The 5% refer to the 2008/2009 population and not to the 2011 population and therefore are not correct!

Discretionary Revisions

1. The last sentence under study setting, line 124-125 needs revision to be clear.

2. Drop the word for after drug at the end of line 149 (....for each drug for was ....)

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
