Reviewer's report

Title: Evaluation of using composite HPV genotyping assay results to monitor human papillomavirus infection burden through simulation

Version: 3 Date: 9 December 2014

Reviewer: Eric Chow

Reviewer's report:

The method section is not clear and authors need to explain it in details.
1) Please explain how the estimated-to-true prevalence is calculated.
2) It is not clear what the 'true' prevalence is referred to.
3) Page 6. Please explain why the six sets of specificity and sensitivity were used.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
