Reviewer’s report

Title: Antifungal wound penetration of amphotericin and voriconazole in combat-related injuries: case report

Version: 2
Date: 27 February 2015

Reviewer: Javier J Afeltra

Reviewer’s report:

The case reported entitled “Antifungal wound penetration of amphotericin and voriconazole in combat-related injuries. case report” is well written and is according with the requirements from the journal.
I suggest that is suitable for publication with minor revisions.

1) Patient 2 was treated initially with amphotericin B and voriconazole and then, only with voriconazole. It would be useful to add in the text patient 2a and 2b as in mentioned in Table 1 and Figure 1 in order to be more clear.

2) Line 158: It would be interesting to clarify what kind of hyphae were observed in the direct microscopic examination. Were those, septate, non septated, hylane, pigmented?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
