Title: Making inroads into improving BV treatment – striving for long-term cure

I have read the above manuscript and my comments are:

MinorEssential Revisions

GENERAL REMARKS

In this review, we will outline why BV is such a clinical and epidemiologic conundrum, and propose key research priorities that focus on the common goal, the elusive sustained cure.

Although the findings are interesting it can be considered for publication, but several points should be modified.

SPECIFIC REMARKS

Some example of are reported below.

In Background
in Australian women[1],... put a space
inflammatory disease[5]. inflammatory disease[5].

In Strategies to boost favourable Lactobacillus spp: vaginal probiotics and hormonal contraceptives
spp.(L.acidophilus,L.gasseri. L.fermentum. L.rhamnosus and L. crispatus), ],... put a space

In a study of 90 women without BV who used the vaginal strain L.crispatus CTV-05, .. put a space after L.
(containing L. brevis, L. salivarius subsp. saliciniius, change saliciniius
In New strategies to disrupt vaginal biofilm

In Biography

Put the names of bacteria in italics

In the manuscript, there are a lot of spelling and punctuation errors which should have been avoided before the manuscript was submitted

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** Yes, and I have assessed the statistics in my report.
