Reviewer's report

Title: Brain Ventricular Dimensions and Relationship to Outcome in Adult Patients with Bacterial Meningitis.

Version: 3 Date: 19 June 2015

Reviewer: Cornelius Faber

Reviewer's report:

The authors have answered to all my comments and in a few instances followed my suggestions. In total, however, the authors opted to only minimally improve the manuscript. The substantial suggestions I have made were eloquently turned down.

I understand that assessment of the co-morbidities is difficult with the available data.

However, by refusing to perform a volumetric 3D analysis the authors choose not to invest any further work and miss a great chance to augment the value of their paper. So be it.

In total the paper is an valuable addition to the existing literature and can be published in the present form.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
