Reviewer's report

Title: An open-label, pragmatic, randomized controlled clinical trial to evaluate the comparative effectiveness of daptomycin versus vancomycin for the treatment of complicated skin and skin structure infection

Version: 2
Date: 27 February 2015
Reviewer: George Kam Hop Li

Reviewer's report:
An interesting article to compare the cost effectiveness of daptomycin compared to vancomycin when hospital stay is included. It will be good if the discharge criteria can be elaborated more to make the hospital length of stay more objective.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
