Reviewer’s report

Title: What is needed to guide testing for anorectal and pharyngeal Chlamydia trachomatis and Neisseria gonorrhoeae in women and men? Evidence and Opinion

Version: 0 Date: 13 Aug 2015

Reviewer: Marcus Chen

Reviewer's report:

This review discusses extragenital infections with chlamydia and gonorrhoea in women and compares published data in women with those from men who have sex with men.

Could the authors indicate if this was a systematic review? The description of the search seems to indicate it was not systematic. Also it appears that a literature search was done for women but not formally for men who have sex with men who are compared with women.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
