Reviewer’s report

Title: Symptomatic Congenital Cytomegalovirus Disease Following Non-primary Maternal Infection: A Retrospective cohort study

Version: 0 Date: 06 Nov 2016

Reviewer: Shannon Galvin

Reviewer's report:

Overall well written and interesting paper describing antenatal CMV infection status and antenatal characteristics of mothers of infants with symptomatic congenital CMV infection. Given that the subjects are all symptomatic, not much can be said about the risks of non-primary CMV infection. Rather, the paper can describe what proportion of the subjects had evidence of primary vs non-primary antenatal maternal infection and any differences between the groups in clinical presentation.

One or two small typos noted.

Statistics seem accurate on spot check, maybe highlighting those variables that were statistically different in the table visually would be helpful.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
