Reviewer’s report

Title: Bordetella bronchiseptica pneumonia in a patient with lung cancer; a case report of a rare infection

Version: 0  Date: 23 Jun 2017

Reviewer: Rosmari Horner

Reviewer’s report:

In conclusion this phrase needs to be modified because there are more than seven species of Bordetella:"Conclusions Among the seven species of Bordetella, three are exclusively respiratory pathogens in mammals: B. bronchiseptica, B. pertussis and B. parapertussis. B. bronchiseptica, a gram-negative coccobacillus, is primarily a zoonotic pathogen associated with human disease. It has been reported to cause a wide spectrum of illnesses ranging in severity from mild respiratory symptoms to sepsis and death [2]."

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
