Reviewer’s report

Title: Primary care challenges of an obscure case of "Alice in Wonderland" syndrome in a patient with severe malaria in a resource-constrained setting: a case report

Version: 0 Date: 12 Sep 2017

Reviewer: Harriet Mayanja-Kizza

Reviewer's report:

This is a well written case report on a rare syndrome but one which persons practicing in clinical medicine should at least be familiar with. It was new to me - but I found a article very informative. The write-up is clear and concise, with a good discussion taking in fact the noted limitations. The abstract is free standing and well summarized.

Minor discretionary corrections.

a. Introduction - line 18, "Severe malaria is a life threatening...". I suggest "Severe malaria may be a life threatening...". - as today with improving management options, outcomes are more favourable

b. Case presentation, page 4 line 50 - Felix-Widal test does not "rule out typhoid" - but this is ably clarified in the discussion.

Otherwise I have no pertinent corrections or suggestions.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
