Title: Case Report: A fatal case of disseminated adenovirus infection in a non-transplant adult haematology patient

Version: 0 Date: 27 Aug 2017

Reviewer: David A. Ornelles

Reviewer’s report:

This report is succinct, informative and very well written. The only suggestion I might offer is to make explicit note of the absence of adenovirus in the first broncho-alveolar lavage. I assume this is the case since a H. flu was found and the sample "was negative for all other pathogens." If there was no data on the presence of adenovirus DNA in the first lavage, that should be noted.
