Title: Acute Biliary Events During Anti-Tuberculosis Treatment: Hospital Case Series and Nationwide Cohort Study

Version: 0 Date: 09 Aug 2017

Reviewer: Jiazhen Chen

Reviewer's report:

Major comments:

1. Some statistical methods and some p values calculated are not correct. For numbers <5, Fisher exact test should be used rather than chi-square test. The t-test part, which I cannot recalculate, also need careful calculations.

2. Although statistically significant, the RR of age (1.02-1.04) was no higher than 1.0. Therefore, the conclusion that age is a major risk factor for ABEs is not clinically convincing.

Minor comments:

The language needs corrections before being published.
