Reviewer's report
Title: Prolonged persistence of IgM against dengue virus detected by commonly used commercial assays

Version: 1 Date: 05 Jan 2018

Reviewer: Sibelle Buonora

Reviewer's report:
The article is very well written with good methodology. I can imagine the task in collecting convalescent samples so long after disease onset.

I would only suggest thinking about including Zika in the paper. Even though it seems that this disease was not a concern in Taiwan at data collection time, Dengue IgM tests demonstrate important cross-reactivity rates in Zika infections since both are Flavivirus.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
I am able to assess the statistics
