Reviewer’s report
Title: Prolonged persistence of IgM against dengue virus detected by commonly used commercial assays

Version: 1 Date: 15 Jan 2018

Reviewer: Mahmoud Aly

Reviewer's report:
General comments:
Another prospective study focused on the ant Dengue virus detection infection in patients. The study was designed to evaluate the anti-DENV IgM persistence in adults and in asymptotically infected people. While it is a repetitive approach, however the highlighted outcome is significant and concourse will be worthy of reporting.

Specific comments:
Most of my comments were covered previouslyin
although the question regarding the regression analysis based on small population (n=44) need to be addresed

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
