Reviewer’s report

Title: Chinese Health Literacy Scale for Tuberculosis Patients: A Study on Development and Psychometric Testing

Version: 0 Date: 04 Dec 2018

Reviewer: Olalekan Uthman

Reviewer's report:

The study developed and conducted a detailed psychometric test for Chinese health literacy scale for tuberculosis. The study reads well and has potential to add to the body of literature in the field. The method was described in detail to allow for replication. I have no major concerns.

Minor comments:

1. The authors should consider summarizing the four factors in the abstract section

2. Can the authors find more descriptive and informative names/labels four clusters? For example, factor 1 seems to be related medications and second factor more related to treatment and care adherence?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
