Title: Low concordance of oral and genital HPV infection among male patients with sexually transmitted infections in Vietnam

Version: 1 Date: 23 May 2019

Reviewer: David Mesher

Reviewer’s report:

The authors have addressed previous concerns about the statistical analysis and used an appropriate approach to consider infections from different samples collected from the same individual.

I have one minor comment that authors should take care not to put too much emphasis on arbitrary cut-offs (e.g. to say there was poor concordance with kappa 0.20 but fair concordance with kappa 0.21)

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
