Reviewer’s report

Title: A case report of Coccidioides Posadasii meningoencephalitis in an immunocompetent host

Version: 0 Date: 05 Jul 2019

Reviewer: David Boulware

Reviewer’s report:

This is a straightforward case report of a person infected with Coccidioides posadasii acquired in an endemic region, presenting with meningitis in a non-endemic region.

More details on:

1) Coccidioides serology? was this a commercial serology? or sent to reference laboratory? (or a home-made assay?)

2) dose of liposomal amphotericin used

3) "high dose" fluconazole -- what is this dose? 800mg? 1200mg?

Style:

1) I would recommend to avoid non-standard abbreviations. For example, AmBd abbreviation is only used twice.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
