Reviewer’s report

Title: Echogenic Foci in Thyroid Nodules: Diagnostic Performance with Combination of TIRADS and Echogenic foci

Version: 0 Date: 13 Feb 2019

Reviewer: Kaan Orhan

Reviewer’s report:

The authors studied retrospectively diagnostic performance and malignity prediction of thyroid nodules with combination of various TIRADS system and echogenic focus and they reached a PPV of 50-90.9% .

Although the authors stated that they evaluated 'Spongiform appearance' of the nodules but I couldn't find any results regarding this.

Please provide USG images all types ecgonic focus.

There are couple of studie smissing esp. TIRADS, which should be discussed and also entered into Introduction part as well.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
