Reviewer’s report

Title: Effect of exposure parameters of cone beam computed tomography on metal artifact reduction around the dental implants in various bone densities

Version: 0 Date: 06 Jan 2019

Reviewer: Boguslaw Tomanek

Reviewer's report:

The authors describe the effects of exposure parameters (mA, FOV) on CBCT metal artifact in dental implants in vitro with different (27) densities.

They concluded, that smaller FOV gives less artifacts irrespective of bone densities and mA

It is a simple, well written yet an interesting ms.

I have only one comment: I suggest removing a word "taking" in the figure captures. Simply write: "CBCT scans of…"

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
