Reviewer’s report

Title: Ataxia as the main manifestation of tumor-like primary angiitis of the central nervous system: A case report and literature review

Version: 2 Date: 07 Sep 2019

Reviewer: Shouxian Tang

Reviewer's report:

Tumor-like PACNS is a subtype disease of PACNS which has no correlation with infection and autoimmunity. It mainly invades the small or medium vessels (arteries or veins), and the leptomeninges of the brain and spinal cord. The early diagnosis and treatment of PACNS is very important. This paper showed with one case of tumor-like PACNS. Needs some language corrections before being published. Thank you.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
