Reviewer’s report

Title: Comparing complications of urethral stricture across various ages: a retrospective analysis of findings from retrograde urethrogram and voiding cysto-urethrogram over 10 years

Version: 0 Date: 11 Jul 2019

Reviewer: Magdalena Maria Wozniak

Reviewer's report:

This is a very interesting paper analyzing the stricures of male urethra. However, I would encourage the authors to describe in more details the Methods section. E.g. the results contain the analysis of types of stricture (short/long etc.) but authors do not specify what was classified as short or long stricture.

The manuscript would also present much more value if the authors would be able to show not only the complications but also the distribution of causative factors. And interestingly if there are correlations between causative factors and types of strictures and complications.

Are the methods appropriate and well described?  
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?  
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?  
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?  
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
