Reviewer’s report

Title: Clinical manifestations and multi-slice computed tomography characteristics of solid pseudopapillary neoplasms of the pancreas between males and females

Version: 0 Date: 05 Sep 2019

Reviewer: Nicola Panvini

Reviewer's report:

This paper deals with an interesting topic, not yet widely addressed in the published literature. I have some recommendations:

- Add references to the introduction
- Please change the term "calcification level" as it is confusing given that calcification were just subjectively evaluated
- Add a 2x2 contingency table to describe diagnostic accuracy results.
- Images should be zoomed to make the findings described in the captions more evident
- The discussion should be modified to describe more thoroughly the potential clinical implication, rather than repeat the results

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
