Reviewer’s report

**Title:** Genes involved in muscle contractility and nutrient signaling pathways within celiac disease risk loci show differential mRNA expression

**Version:** 2  
**Date:** 19 May 2015

**Reviewer:** Lude Franke

**Reviewer’s report:**

The authors have addressed my comments. I however believe the authors should make it explicit throughout the manuscript for each of the tables and numbers provided how many eQTLs pertain to SNPs that have been at genome-wide significance in GWAS, because these are the SNPs that people believe are true positives.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests
