Reviewer's report

**Title:** A new case of de novo 6q24.3 Deletion on Paternal Chromosome 6 with Growth Hormone Deficiency: a twelve years follow-up

**Version:** 1  **Date:** 26 March 2015

**Reviewer:** cornelis noordam

**Reviewer's report:**

The authors report a further case report on this relatively rare condition. It contributes on the knowledge of growth in this condition and the possible benefit of hGH treatment.

**major comments**

1. Page 3 IUGR: please reformulate into SGA
2. page 4 paragr 5: details on development can be reported upon more global eg development was only slightly delayed
3. page 5: the clinical description and the longitudinal description should be abbreviated; it is far too long
4. page 5 paragr 2 and 3: please provide normal values for IGF1 and IGFBP3; these values do not appear as too low to me
5. page 6 last paragraph details on growth are also reported in the growth curve and are not helpful
6. page 7,8 and 9 can be written more concise; eg the same conclusion on the use of hGH is written twice; I would say that this part could be reduced to 60 % of the current length

**minor comments**

**discretionary revisions**

**Level of interest:** An article of limited interest

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
